Edder Ramírez

Software Engineer | AI & Python | GDG Organizer

edderleonardo@gmail.com | Remote | linkedin.com/in/edderleonardo/ | github.com/edderleonardo

PROFESSIONAL SUMMARY

Software Engineer specialized in Python, building AI systems that run in production. I develop RAG systems and agents with the Google ecosystem (Gemini, ADK, Vertex AI), along with the data pipelines and cloud infrastructure behind them: ETL, data synchronization and cleaning, Cloud Run, Cloud SQL and Cloud Storage. My focus is what makes AI reliable in production: data quality, evaluation, cost control and security.

WORK EXPERIENCE

Python Software Engineer (AI & Data) *2024 - Currently working*

IM Digital

I integrate LLMs (Gemini on Vertex AI) into real e-commerce products and build the data pipelines that feed them: from semantic search and visual product discovery to multi-agent assistants with Google ADK.

- Designed and built RAG (Retrieval-Augmented Generation) systems with LlamaIndex, Vertex AI, and PostgreSQL + pgvector for semantic search with real-time streaming (SSE)
- Built an AI-powered product tagging proof of concept for a beauty brand on Shopify: a FastAPI backend receives product webhooks and processes them in the background, detects changes against PostgreSQL to skip unnecessary model calls, and uses Gemini Vision (Vertex AI) to suggest tags from images and descriptions. It also generates accessible ALT text for all of a product's images in a single multimodal call. Tags and their status are stored in Shopify metafields, and an embedded Shopify app (React Router + Polaris) lets operators review, edit, and approve them before they're applied via the GraphQL Admin API (human-in-the-loop)
- Developed visual product search APIs using Google Vision AI and vector similarity (pgvector, Weaviate) for e-commerce clients in the jewelry industry
- Built multi-agent AI assistants with Google ADK and Gemini, orchestrated via SequentialAgent with 8+ async FunctionTools, shared state management (ToolContext), dynamic instructions, and PostgreSQL-backed session persistence with admin dashboards for session monitoring
- Designed an ETL pipeline that merges Microsoft Business Central (ERP) and Shopify data into a unified catalog for a plant nursery's AI assistant: per-field source-of-truth rules, canonical cleaning and normalization, incremental and idempotent loads (UPSERT), and a 3-phase batch processor that cut database queries from ~100 per product to ~35 per batch. Implemented content-hash change detection to regenerate Vertex AI embeddings only when semantic content changes, run as background jobs
- Containerized and deployed microservices to Google Cloud Run with Docker multi-stage builds, Cloud SQL, and Cloud Storage

Skills: Cloud Run, Data Pipelines, Docker, ETL, FastAPI, Gemini, Google ADK, Google Cloud Platform, Google Vision AI, GraphQL, LlamaIndex, LLM, Microsoft Business Central, pgvector, PostgreSQL, Python, RAG, React, Shopify API, Vertex AI, Webhooks

Python Software Engineer *2024 - 2026*

IA Interactive

I work as a Python Backend Developer, responsible for creating and maintaining microservices. Additionally, I collaborate in the development of various SDKs for different company projects.

- Designed and actively participated in the architecture and development of a central multiplatform SDK that optimizes system error handling, improving user experience and facilitating problem diagnosis.

Skills: AWS, DynamoDB, FastAPI, Python, Java

Python Backend Developer *2024 - 2024*

K2 Partnering Solutions

I collaborated on a project where data uploaded from a CSV file was manipulated and processed to send to an API, in order to create different energy offers and generate graphical visualizations. Additionally, I built microservices using Python and Serverless Framework, which were consumed from the application's frontend.

Skills: AWS API Gateway, AWS CloudWatch, AWS DynamoDB, AWS EC2, AWS Lambda, CodeCommits, Git, Postgres, Python, Serverless Framework, SQL

FullStack Developer *2021 - 2023*

Destácame

I maintained and added new functionalities to the company's product. My work focused on ensuring comprehensive development to constantly optimize and enrich the product.

- Orchestrated the integration of APIs from financial institutions such as Vexi, Financiera Independencia, CuraDeuda, Creditea, Escampa, Amicar; significantly enriching the catalog of products available for users on the platform.
- Worked on designing and optimizing the user interface for credit bureau reports, with the goal of making it clearer and easier to use for our end users, thus improving the clarity and usability of the interface.
- Developed a project using Django that generated credit bureau reports, achieving a drastic reduction in errors and improving process accuracy by 90%.
- Revolutionized user experience through intuitive improvements in our platform navigation, resulting in a notable increase in accessibility and efficiency.
- Created a landing page to help users pay their overdue debts, which was used by more than 47,000 people.

Skills: AWS API Gateway, AWS CloudWatch, AWS DynamoDB, AWS EC2, AWS Lambda, CSS, Django, Django Rest Framework, Git, Github, HTML, JavaScript, Jinja, MySQL, Python, SASS, Tailwind, Vue

FullStack Developer *2020 - 2021*

Alluxi

I collaborated at the company as a web developer, responsible for maintaining and implementing new functionalities in existing systems.

- I was responsible for maintaining and contributing to software that simplifies the process of managing scholarships and student exchanges with foreign schools, optimizing the student onboarding process and providing a comprehensive view of educational offerings available at various institutions.
- Designed and contributed to a continuing education platform that revolutionized how users access new courses, integrating Conekta as a payment platform to facilitate access to continuous learning and professional development.
- Led the construction of a platform to manage social event invitations, simplifying how users send and manage their invitations, as well as itinerary planning for social events, improving the overall user experience in event organization.
- Developed an insurance platform that optimized contract generation for various types of insurance, offering users a more efficient and personalized experience to obtain coverage according to their specific needs.

Skills: AWS EC2, CSS, SASS, Docker, Django, Django Rest Framework, Git, Github, HTML, JavaScript, Postgres, Python, Vue

Application Support *2019 - 2020*

Klatus

I performed application support functions at the company, providing assistance to various previously developed and delivered systems. Additionally, I incorporated new functionalities according to specific needs.

- Designed and developed a platform for community risk analysis, displaying statistics by municipality to provide a comprehensive view of potential risks.

Skills: Django, Django Rest Framework, Git, Github, HTML, JavaScript, Postgres, Python

Django Developer *2019 - 2020*

Evient

I participated as a Backend Developer at the company, providing support to existing systems, fixing modules, and adding new functionalities to improve their performance.

Skills: Django, Git, Github, HTML, JavaScript, Postgres, Python

Django Developer *2018 - 2019*

Vordem Software

I worked as a Django developer at the company, providing support and assistance to various systems created for clients. Additionally, I began collaborating on the internal development of a product.

- Developed a system to connect suppliers with buyers in the business environment.
- Created a system for exchanging digital artworks within a company.
- Built a system where projects could be registered and mentors could provide feedback.

Skills: CSS, Django Rest Framework, Django, Git, Github, HTML, JavaScript, Jinja, Jquery, Postgres, Python

VOLUNTEER

Organizer *2024 - Currently*

GDG San Francisco de Campeche

I organize events, workshops and meetups for the Google Developers Group community in Campeche, promoting learning of Google technologies and networking among local developers.

EDUCATION

Information Systems Engineering *2011 - 2013*

Universidad Interamericana para el desarrollo (UNID)

SKILLS

HTML, CSS, JavaScript, Tailwind, Vue, React, astro, Git, GitHub, Python, Django, FastAPI, Flask, MySQL, Postgres, AWS, Jinja, Google ADK, LlamaIndex, Google Cloud

PROJECTS

Docwise *(https://docwise-web.vercel.app/)*

Production RAG application to chat with your PDFs: ingestion and chunking with LlamaIndex, Gemini embeddings with pgvector similarity search, streaming answers (SSE), RAG quality evaluation with DeepEval, layered abuse protection (rate limiting + daily budgets), and CI/CD with GitHub Actions to Cloud Run.

UmafeIP *(http://umafeip.com/)*

Website and clinical record system for a medical office in Campeche, Mexico.

Eventy *(https://eventy.mx/accounts/login/?next=/)*

System that helps manage social event invitations. Developed at Alluxi Agency.

Se buscan proveedores *(https://sebuscanproveedores.com/)*

Platform that helps connect suppliers with customers and vice versa in Mexico. Developed at Vordem Software Agency.

SARA *(https://sarasalud.com.mx/)*

Cloud-based practice management platform for medical offices in Mexico: clinical records, appointment scheduling, prescription and document generation with WhatsApp delivery, and specialty-specific templates (General Medicine, Gynecology, Pediatrics).

LANGUAGES

Spanish (Native speaker), English (B1 - Intermediate)

STRENGTHS

Adaptability, Continuous Learning, Self-control, Self-discipline, Collaboration, Determination, Persistence, Problem Solving, Teamwork
